[Submit]

Undecided on how to provide access to the operator/researcher only functions. For the time being, a menu heading only showing when a operator/researcher is logged in will suffice. This is not super important in the grand scheme of things and is very easy to change. It also has no effect on implementing the actual functionality.

How many routes might be chosen?
Open to suggestions on how to choose multiple routes. If a lot are chosen then this certainly isn't a good way of going about it.
